iLockerz

INTELLIGENT
LOCKER SOLUTIONS

iLockerz locker systems provide an intuitive and secure solution for making essential devices accessible to those who need them 24/7, 365 days of the year.

Modern organisations demand flexibility, highlighting the need for a smarter way to connect their workforce with IT essentials whenever they are needed.

iLockerz allows teams to collect and return devices to a single storage location at their convenience, minimising the pressure on busy ITSM operations.

Reactive IT Asset Loading

1 Employee requests new device

2 IT engineer loads device into locker, issuing PIN or QR code to employee

3 Employee collects device from locker using PIN/QR code, returning old device if needed

Pre-Emptive IT Asset Loading

1 Available locker compartments are loaded with available IT assets and a PIN code is created for the collection of that device

2 Employee requests new device and IT admin or 3rd party integration retrieves a relevant code from the locker system software/database

3 Employee collects device from locker using code, returning old device if needed

Each individual locker can accommodate multiple use needs, also allowing IT and admin teams to easily track any device in real-time.

Standalone solution, versatile functionality

Designed to withstand high-volume use with no dependency on integration, iLockerz automates asset management processes and enhances user experiences for:

- multiple uses in a variety of environments
- assigning digital devices to new or existing employees
- facilitating the short-term loans of laptops, tablets, smartphones, accessories or other IT equipment
- scheduling collection and swap-out of faulty devices
- sending items or supplies across departments
- BYOD / temporary storage of personal belongings
- integration with existing management software packages

Powerful web software, seamless management

iLockerz solutions are configured with back-end web software, allowing authorised IT and admin teams to:

- gain complete visibility, traceability and accountability of all assets
- set rules, alerts and to instantly generate reports
- arrange support proactively as needed
- reduce in-person interactions to boost efficiency

Level-up Options

Easily customisable, optional extras include in-compartment charging and direct-to-user email or SMS notifications. Plus, optional API and readily available integrations via SIP2, with ServiceNow, Active Directory and much more.
